NutrYWell – Commercial Workshops Summary

Sales & Commercial Operations

This document consolidates the inputs voiced by Commercial teams during workshops. It captures the day-to-day reality at the customer interface, including why customers choose one channel over another, how engagement models influence expectations, and which questions Commercial repeatedly faces when managing customer promises.

Scope. Commercial organization; channel choice; contracted engagement vs transactional buying; portfolio positioning and innovation launches; seasonality as used by Commercial; and information gaps impacting customer promise management.

1. Field context

Commercial teams describe NutrYWell as operating in a fast-moving human health market where customers increasingly expect a smooth buying experience: simple ordering, quick confirmation, clear expectations, and consistent follow-up. In workshops, Sales repeatedly emphasized that customer trust is created well before physical preparation starts. What customers remember is how easy it was to order (order intake), whether someone answered quickly, and whether the promise stayed stable over time.

2. Commercial organization

The Commercial organization is structured by product range and then by geographic coverage clusters. Two Sales lines are visible:

- Core range: led by an EU Manager Core, with Sales coverage split into 6 country clusters.
- Lifestyle range: led by an EU Manager Lifestyle, with Sales coverage split into 9 country clusters.

Overall, this corresponds to 15 Sales roles (country-clustered) plus 2 range Managers (Core & Lifestyle). Commercial teams explained that this split allows different commercial positioning and customer conversations by range, while keeping a consistent geographic logic.

Range	**Sales coverage clusters (countries grouped)**	**Sales roles**
Core	• FR/BE/NL/LU/IE; • ES/PT; • DE/AT/DK; • PL/CZ/SK/HU; • IT/MT/SI/HR/GR/CY/BG/RO; • SE/FI/EE/LV/LT	6
Lifestyle	• FR/BE/NL/LU/IE; • ES/PT; • DE/AT; • PL/CZ/SK/HU; • DK/SE/FI; • EE/LV/LT; • IT/MT; • SI/HR; • GR/CY/BG/RO	9

3. Why customers choose NutrYWell

Commercial teams reported two recurring reasons customers select NutrYWell. First, customers perceive NutrYWell as offering an extensive range that covers most of their needs in human health—reducing the need to split volumes across multiple suppliers. Second, customers expect reliability once they engage: continuity of conditions, stable follow-up, and confidence that NutrYWell can support them over time.

4. Channel choice – the customer WHY

A key workshop outcome is that channel choice is not primarily a 'stock' topic. Customers choose the channel that best matches their buying behavior and their preferred relationship with NutrYWell. In simple terms, customers weigh two dimensions: (1) convenience and speed of ordering, and (2) level of engagement/commitment and the stability they expect in return.

4.1 E-commerce channel (self-service, transactional)

Customers typically choose e-commerce when they want a frictionless ordering experience. The platform is perceived as the easiest way to place an order: it is available 24/7, does not require a Sales interaction, and is simple for customers who buy occasionally or who want to test volumes without committing. Commercial teams link this preference to 'no minimum engagement' and to the comfort of a checkout-like journey. From the customer's viewpoint, it is the most convenient route when they prioritize speed and autonomy.

Commercial teams also described the implicit trade-off customers accept: e-commerce is perceived as more dynamic. Even when stock issues are said to be rare, customers associate e-commerce with a 'depending on availability' mindset for delivery commitment communication, compared to a relationship-based model.

4.2 Account-managed channels (Pharmacy / Retail / Distributors)

Customers choose account-managed channels when they value a structured relationship and commercial stability. These customers are willing to enter a more formal engagement, typically involving a minimum annual commitment or a broader commercial agreement. They also tend to discuss an indicative forecast with Sales. In exchange, customers expect clearer conditions, a dedicated contact, and a more predictable relationship—especially for recurring demand.

Commercial teams emphasized that this model is not chosen because it is 'faster' to order, but because it provides reassurance and continuity. The perceived trade-off is heavier onboarding and a less instant ordering journey compared to e-commerce.

5. Contracted engagement vs transactional buying

Workshops distinguish two broad customer behaviors. Contracted customers (those who negotiate conditions and align on yearly intent) typically prefer account-managed channels; they view the relationship itself as part of the value, and they expect that their engagement and forecast discussions are recognized. Transactional customers prefer flexibility: they want to order quickly, without administrative steps or minimum commitments, and they prioritize ease of purchase above all.

6. Portfolio dynamics & innovation launches

Commercial teams underlined that customer conversations are increasingly influenced by portfolio evolution. NutrYWell's positioning relies on keeping a wide and modern offering: some products naturally decline in market traction over time, while innovation products are prepared to capture new demand. Sales teams describe actively preparing the ground for launches—explaining the positioning to customers, aligning on expected uptake, and managing early questions. Launch moments can temporarily change demand patterns, generating trial orders and short-term peaks as customers test new references.

7. Seasonality – a Commercial tool to position products

Commercial teams described seasonality as a practical tool to support conversations and planning. It helps them position products (or product families) into an approximate seasonal behavior: some are more winter-driven, others are more summer/lifestyle-driven, and some remain relatively flat. The purpose is commercial alignment and anticipation (campaign timing, expected peaks), not mathematical forecasting.

During workshops, Sales explained that this table is used as a shared reference: when discussing a product, the team agrees on the closest seasonality profile and uses it to set expectations internally (e.g., what months typically feel busier for that family) and externally (e.g., when customers may naturally replenish).

Seasonality profiles (commercial reference).

Seasonality	M01	M02	M03	M04	M05	M06	M07	M08	M09	M10	M11	M12
Flat	1/12	1/12	1/12	1/12	1/12	1/12	1/12	1/12	1/12	1/12	1/12	1/12
Winter	10%	10%	9%	8%	7%	7%	6%	7%	8%	9%	9%	10%
Winter Mild	10%	9%	9%	8%	8%	7%	7%	8%	8%	8%	9%	9%
Winter strong	11%	11%	10%	8%	6%	5%	6%	6%	7%	9%	10%	11%
Summer	7%	7%	7%	8%	9%	10%	10%	10%	9%	8%	8%	7%
Summer Mild	7%	7%	8%	8%	9%	10%	9%	9%	9%	8%	8%	8%
Summer Strong	7%	6%	7%	7%	9%	10%	11%	11%	9%	8%	8%	7%
Spring	8%	8%	9%	10%	9%	8%	7%	8%	8%	9%	8%	8%
Spring Strong	7%	8%	10%	11%	10%	8%	7%	7%	8%	8%	8%	8%

8. Commercial questions & information gaps

Commercial teams repeatedly emphasized that they operate at the customer promise interface: they must confirm, explain, and defend commitments quickly. When information is unclear or definitions differ across touchpoints, customer trust becomes fragile and Sales must revert to ad-hoc follow-ups. Below are the recurring questions raised during workshops, expressed in practical field terms.

Lead time rules and cut-offs: Sales asks what really drives feasibility and expected dates, and how country constraints affect the answer. Without shared rules, two similar customer requests can receive different answers, which customers interpret as inconsistency.

Meaning of 'confirmed': customers ask for a single confirmation, but internally several states exist. Sales wants to use one clear language so customers understand what they can assume at each moment.

What makes demand 'secured': especially for contracted customers who discuss yearly engagement and forecasts, Sales needs a stable message on what is protected at order time. Customers ask whether their demand is effectively secured once they place orders.

Distributor governance & escalation: who owns onboarding steps, who validates exceptions, and how escalations work when a distributor operates across countries. Commercial teams explain that unclear ownership creates back-and-forth and increases the effort required to keep relationships smooth.

Portfolio evolution visibility: what is being launched, what is fading out, and what messaging should be used. Sales prepares the market and wants to avoid contradictory narratives.

9. Consolidated summary of the Commercial voice

Commercial workshops depict customers choosing channels based on a trade-off between convenience and engagement stability. E-commerce is perceived as the easiest route to order with no minimum commitment, making it attractive for transactional customers and occasional buyers. Account-managed channels are preferred by customers who want a negotiated relationship and yearly engagement logic, and who value continuity and reassurance over instant ordering. Across both models, Commercial teams underline that customer trust depends on clear and consistent messages about lead times, confirmation meaning, and portfolio positioning throughout the year.
